

ZENEZ

Z-E4626

Vehicle-Specific Naviceiver

Compatible with MERCEDES-BENZ Sprinter | Viano | Vito

VEHICLE-SPECIFIC NAVICEIVER FOR MERCEDES BENZ

The Z-E4626 is an innovative and advanced motorhome navigation system including specifically developed for the Mercedes-Benz Sprinter II, Vito, and Viano. The Z-E4626 blends in perfectly with the **original look** of your vehicle and can be conveniently controlled via its large high resolution 8"/20.3 cm touchscreen display.

With the Z-E4626 you are able to experience an amazing range of entertainment options in your vehicle. The Z-E4626 offers you a large selection of programs, especially also due to new digital media. Enjoy radio with crystal clear sound like at home, with the **DAB+ tuner**. The built-in **CD/DVD drive** and a **USB port** allow you to play back latest audio and video formats. The integrated **Gracenote functionality** gives you convenient control over large music libraries, including HD Audio files. A powerful **4 x 50 watt amplifier**, together with a **DSP suite** consisting of a 11-band parametric equalizer and independent time alignment of each channel, ensures optimum sound quality in each vehicle.

The database supported, high performance **Bluetooth module from Parrot** ensures stress free hands-free operation and truly comfortable A2DP music streaming from your smart phone.

With its **EU map package** with 47 countries, the **CampingSchaf POI package** and more than **6 million Premium POI**, the Z-E4626 guides you reliably and safely to any destination. By choosing a **vehicle profile** and entering vehicle-specific data, you plan any route more safely.

VEHICLE COMPATIBILITY LIST

Brand	Model	Model Type	Model Year
Mercedes-Benz	Sprinter	W906	as of 2006
Mercedes-Benz	Vito 2G	W639	2006 – 2014
Mercedes-Benz	Vito 3G	W447	as of 2014
Mercedes-Benz	Viano	W639	2006 – 2014

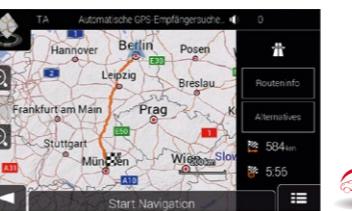

- Before you purchase, check whether OE radio and Z-E4626 are compatible.
- The Z-E4626 has been conceived for the retrofitting of vehicles with radio preparation. The Z-E4626 scope of delivery does not include CAN or stalk adapters. For vehicle integration of certain functions, e.g. CAN or multifunction steering wheel button support, separately adaptors are required.
- Mercedes Sprinter II models with OE radio provision may require a specific MB original mounting frame for device installation.
- For best radio reception, an appropriate active antenna system is assumed/compulsive. If such an antenna is not available in the car, it should be retrofitted.

A detailed list of the device specifications and functions can be found at www.zenec.com under 'Specifications'.

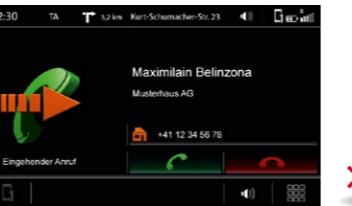

Optimal integration in the Mercedes-Benz

Specifically developed for the Mercedes Sprinter II, Vito, and Viano: With its specific construction and button illumination in amber, this E>GO blends in perfectly with the named vehicles. With separately available stalk interfaces, the ZENEC Z-E4626 can easily be connected to the multifunction steering wheel in the vehicle. The audio and telephone button functions of the steering wheel are supported.

ZENEC NextGen Navigation

The EU map package with 47 countries navigates using the new ZENEC NextGen navigation engine, and contains more than 6 million Premium POI. Detailed map data, 3D rendering of terrain and landmarks, TMC, Auto-Zoom, Lane Assist, and other Smart modes make the Z-E4626 the perfectly equipped route finder. You can download quarterly published map updates free of charge from the Naviextras portal for one year after starting to use the device.

Bluetooth from specialist Parrot

Advanced phonebook contact search function, easy to edit favorites menu, and other details underscore the performance level of the BT system from Parrot. Special feature is the integrated database. On initial synchronization of the mobile phone the Z-E4626 saves the phonebook – it is available as soon as you get into the vehicle. Three mobile phones, each having up to 1,000 contacts, can be synchronized; two smartphones can be used in parallel.

Rear-view camera interface with optional distance assist lines

You can also easily connect a rear-view camera to the Z-E4626 and control it via the touchscreen. The camera is automatically started by engaging the reverse gear. You have the option of displaying configurable grid lines for better estimation of the distance – independent of any particular model of camera. The E>GO is equally suitable for the connection of rear-view cameras that have a built-in microphone.

20.3 cm/8" TFT LCD Panel

The rather large front panel allows the use of a sharply detailed, luminous 8"/20.3 cm TFT LCD screen, which does not only provide clear overview during active route guidance mode. Even the renderings of UI screens and videos convince with their finely resolved high-contrast picture details. For a dynamic adjustment of image brightness, the system settings offer two setting options: Car and GPS based.

Preconfigured vehicle profiles for motorhomes

To facilitate navigation of large, heavy vehicles, the E>GO allows you to choose between various vehicle profiles so that the device is perfectly matched to your vehicle. By entering vehicle-specific data – height, width, length, weight, trailer etc. – you can plan the route more effectively; bridge height, road width or other restrictions and hazards along the route are included in the calculation.

USB media management by Gracenote

The USB media management with database support of the E>GO with its integrated Gracenote functions is perfectly designed for mobile entertainment. With the Gracenote functions 'More like this' (MLT) and 'Mood', you can create playlists on USB media from your music collection with just a single click. These playlists are either based on a song you have selected, or on your actual mood.

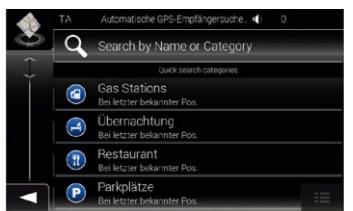

CAM hard key

Aside of the standard automatic reverse gear function, the CAM button allows direct control of the rear view camera with regard to the specific requirements of motorhomes. The CAM key allows for example, to keep an eye on the downstream traffic, or to check the bike carrier and other items on the vehicle's backside. That's just incredibly convenient!

Multituner system with DAB+

Thanks to the new multituner system with FM tuner and DAB+, the full radio program variety can be enjoyed on the road. Optimal radio reception is ensured by two FM/AM and two DAB+ tuners, which functionally complement and support each other. The database supported dynamic background scan function keeps the radio list in check and you permanently up to date. A fifth tuner takes care of the TMC traffic data reception.

CampingSchaf POI database

Detailed information on campsite and motorhome stop-over sites throughout Europe is offered by the pre-installed, very comprehensive CampingSchaf POI package (in German language only). It covers all European countries, and shows you approximately 20,000 different campsite and motorhome stopover sites – so you can pick a suitable location at your destination while you are on the move.

Powerful DSP presets for optimum in-vehicle use

To improve the sound reproduction, dedicated vehicle presets are available. The DSP based speaker management system offers to tailor the in-car frequency response by ear, or by measurement using the parametric 11-band equalizer. With the aid of single-channel time alignment (configurable to 4.2 or 5.1 mode), with distances adjustable in cm or 0.1 ms steps, you can optimize the sound staging.

ZENEC for future-proof connections

Via the Smartlink connection, smartphones or other multimedia devices can be connected to the Z-E4626 using special ZENEC accessories, and controlled from the receiver. The Smartlink interface ensures high picture quality and optimal connectivity in the future. When combined with the HDMI, DVB-T and Miracast Smartlink interfaces from the ZENEC accessory range, the E>GO is best equipped for further developments in the multimedia area.
